CLP Regulation (EC) 1272/2008

'from article 45 to Annex VIII'

➤ CLP article 45

- NVIC is appointed body
(Nadere regels verpakking en aanduiding milieugevaarlijke stoffen en preparaten, art 15h)
- The appointed bodies shall have at their disposal all the information required (...) to carry out the tasks for which they are responsible.

➤ CLP Annex VIII

(Regulation (EU) 2017/542)

- Specification of the product information to be notified
- Introduction of a Poisons Centres Notification (PCN) format
- ECHA responsible for the tools and guidance documents
- Phased deadlines by 1 January:
 - *2020 products for consumer use*
 - *2021 products for professional use*
 - *2024 products for industrial use*
 - *2025 end of transition period*

European Chemicals Agency

'responsible for tools and guidance'

CLP – Annex VIII

We are here for you:

- Technical and scientific guidance and support
- Tools to facilitate submission of information

These include:

- Poison centres notification (PCN) format
- Product categorisation system (PCS)
- Unique Formula Identifiers (UFI) Generator
- Development of a central notification portal
- Guidance and support material

'drafting guidance...'

Guidance phase 1

Phase 1: drafting (on-going)

- Active involvement of authorities and industry via working group

poisoncentres.echa.europa.eu/guidance

- Workshop planned early December
- First draft by end 2017

8 Guidance on harmonised information relating to emergency health responses
Draft (Internal) version 1.0 – Month 201x

1. Introduction

1.1 General introduction

A large number of chemical mixtures are used in the EU on a daily basis. The general public and workers regularly come into contact with them, both in their private life and in the occupational environments.

Chemical products are in general considered to be safe when they are used properly. Nevertheless, unintentional exposure to chemicals can occur, for example due to inappropriate use or accidents. When this happens, immediate access to relevant information on the chemical product is crucial to medical staff and those who provide emergency response.

1.2 Legal background

Already since 1988, Council Directive 88/379/EEC required Member States to appoint a body for receiving information on dangerous preparations in order to meet any medical demand by formulating preventative and curative measures. This directive was repealed by 1999/45/EC, which provided for a similar obligation. Already before that obligation, many Member States had in place a system for collecting information from importers placing chemical products on the market. This information is accessible to the Poison Centres, the bodies established in the Member States to provide medical advice on health emergencies. Depending on the Member State, physicians and other medical staff, workers and the general public are able to contact the Poison Centres to get recommendations on medical treatment.

Article 43 of the CLP Regulation ((EC) No 1272/2008, which entered into force on 1 June 2012) requires the EU Member States to appoint a body for receiving information on the composition of hazardous mixtures (e.g. detergents, paints, etc.) to enable the formulation of preventative and curative measures. The aim of the harmonised information requirements has been to harmonise the information systems in each Member State. Thus importers and downstream users placing mixtures on the market in different Member States have needed to submit similar information in different formats. This diversity has led to inconsistencies in the information available to medical personnel and the general public in cases of poisoning incidents in different Member States.

The European Chemicals Agency (ECHA) endeavoured to address these shortcomings and a review was carried out in consultation with stakeholders and with the support of the European Association of Poisons Centres and Clinical Toxicologists (SANCCT). Following the review as foreseen in Article 43(1) of the CLP Regulation, Commission Regulation (EU) 2017/542 was adopted. The Regulation entered into force on 12 April 2017, adding to the CLP Regulation an annex (Annex VIII) to harmonise, in terms of format and content, the information relating to emergency health response that certain operators placing hazardous mixtures on the EU market are required to provide to the bodies appointed by each Member State (from now on called the "appointed bodies"). This information includes, for example, the chemical identity of the mixture and of the company responsible for the placing on the market, the composition and hazardous ingredients and on the uses. The information must be provided in electronic means in a specified format, which enables the appointed bodies to identify exactly the product of concern and to suggest the appropriate treatment. The appointed bodies and poison centres (which are not necessarily the same entity, although in some Member States this may be the case, see section 2) need to ensure the confidentiality of the information received.

A screenshot of a website interface titled "Poison Centres". At the top, there's a purple navigation bar with three tabs: "Information", "Tools", and "Support". Below the bar, the page title "Poison Centres" is displayed next to a purple sunburst icon. A breadcrumb trail shows "Poisoncentres > Support". On the left, a sidebar menu includes links for "Home", "Information", "Tools" (with a plus sign), and "Support" (with a minus sign). The main content area is titled "Support" and contains three items: "Guidance" (with a pencil icon), "Questions and answers" (with a speech bubble icon), and "Helpdesks" (with a speaker icon).

UMC Utrecht
Nationale Vergiftigingen Informatie Centrum

EU Product Categorisation System

'PCS'

Key principles and purpose

- Product category mandatory in industry notifications
- Single selection based on main intended use
- Supports appointed bodies at EU level
 - reporting/statistical analysis of poisoning incidents
 - identification of risks & proposing risk management measures
- Used by poison centres e.g. for 'backtracking' and registering cases in incidents

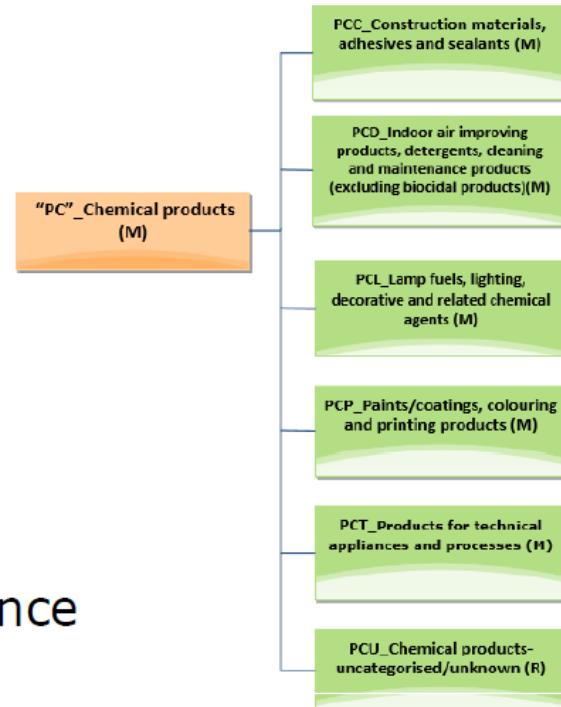

UMC Utrecht
Nationale Vergiftigingen Informatie Centrum

EU Product Categorisation System 'PCS'

Current status

- Draft EU PCS published in March 2017 →
- Final version 1.0 by December 2017
- Active participation from working group
- Development of practical EU PCS manual
- Process for EU PCS update and maintenance currently being developed

IT tools

'Poisons Centre Notification (PCN) format'

Current status

- Draft PCN format and editor available
 - Structured electronic format defining harmonised information requirements
 - Current draft format from 2015 obsolete
- Final version by Q1 2018
 - Revise information requirements (e.g. include product category, support group submission)
 - Align with standardised formats through compatibility with the IUCLID XML format
 - Consider notification process and improve overall data quality by minimising redundancy

UMC Utrecht
Nationaal Vergiftigingen Informatie Centrum

IT tools

'PCN portal feasibility study'

Objectives of the study

- Analysing various stakeholder needs
- Proposing a solution for the portal
- Producing a blueprint of a candidate architecture for the new system that fits into our IT architecture
- Defining the best approach for the delivery of the software
- Providing early estimates of development costs and efforts

UMC Utrecht
Nationaal Vergiftigingen Informatie Centrum

IT tools

'PCN portal feasibility study'

Central portal features

- Collect and dispatch notifications from industry to appointed bodies
 - Secure transfer of information
 - Multilingual support
- Automated submission with agreed validations
 - Technical checks (e.g. virus scan)
 - Business checks and basic verification of key elements (e.g. trade name included in the notification)

v2

Multi-lingual and **secure** web tool for industry to **upload** and **submit** their notification files

A secure portal for **Member States** authorities (**AB/PC**) to **receive and download notifications**

Automated submission process that ensures submitted files conform to the format specifications.

Searchable central repository containing the full history of notified data where actors can retrieve their portion of the data.

Basic **User & Contact management** functions

On-line preparation of notification using a dedicated web UI that seamlessly integrates with the portal's submission process.

Exposing a **Web-service integration layer** that allows secure submission and retrieval of notified data from industry and MS IT systems respectively.

Performing **Automated checks** on submitted files to ensure minimum content compliance against a commonly agreed set of business checks.

REACH en CLP Helpdesk

Wat doen wij?

Nationale REACH en CLP Helpdesk

- Onderdeel RIVM, Centrum Veiligheid van Stoffen en Producten
- In opdracht van ministeries van I&W en VWS
- REACH en CLP Vraagbaak voor bedrijven
- Presentaties bij brancheverenigingen, bijeenkomsten, symposia
- Communicatie met Europees Chemicaliënagentschap (ECHA) en andere nationale helpdesken (EU)

Vraagbaak voor bedrijven

- www.chemischestoffengoedgeregeld.nl
- Jaarlijks ca. 650 vragen schriftelijk beantwoord
- Uitleg van CLP- en REACH-regelgeving
- Focus op midden- en kleinbedrijf
- Maandelijks spreekuur voor bedrijven
- Geen adviseursrol: bedrijven maken eigen keuzes

Rol van Helpdesk bij Productnotificatie

- NVIC is het orgaan waar productnotificaties worden ingediend
- Productnotificatie valt binnen CLP-verordening (Art. 45)
- Helpdesk beantwoordt inhoudelijke vragen over productnotificaties
 - Expertise van NVIC wordt ingezet waar nodig
 - Samenhang met overige regels in CLP-verordening
- Technische ondersteuning indiening buiten scope
- Voor specifieke handhavingsvragen wordt naar inspectie verwezen
